PCT/JP2004/016128

Box No. II	Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)
1. Claims	I search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: Nos.: e they relate to subject matter not required to be searched by this Authority, namely:
2. Claims because extent t	Nos.: e they relate to parts of the international application that do not comply with the prescribed requirements to such an that no meaningful international search can be carried out, specifically:
3. Claims becaus	e they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box No. III	Observations where unity of invention is lacking (Continuation of item 3 of first sheet)
This Internation	al Searching Authority found multiple inventions in this international application, as follows:
. See	extra sheet '
claims	
	searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of ditional fee.
	ly some of the required additional search fees were timely paid by the applicant, this international search report covers hose claims for which fees were paid, specifically claims Nos.:
4. No recrestric	quired additional search fees were timely paid by the applicant. Consequently, this international search report is eted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark on Pr	otest
	No protest accompanied the payment of additional search fees.

International application No.

PCT/JP2004/016128

Continuation of Box No.III of continuation of first sheet(2)

invention 1: claims 1 and 17 invention 2: claims 2 to 4

invention 3: claims 5 to 11, 18 to 20 and a part of claim 14 invention 4: claims 12, 13, 15, 16 and and a part of claim 14

The following document 1 describes a zirconia sintered article for medical use stabilized by Y_2O_3 (see claim 1), and also the matters that said sintered article contains SiO_2 and/or Al_2O_3 (see claims 1 and 3) and that it has an average grain diameter of 0.5 μ m or less (see claim 4).

The following document 2 describes an abrasion-resistant alumina-based ceramic containing a ZrO_2 powder containing Y_2O_3 and having an average diameter of 0.5 μ m or less, an Al_2O_3 powder and a sintering auxiliary (see example 1, sample 13).

The following document 3 describes a zirconia based sintered article containing zirconia grains containing yttria forming a solid solution therewith and alumina (see examples), and the matters that said zirconium particles have a particle diameter of ca. 0.3 μ m (see page 4 Table 1) and that said zirconia based sintered article can be used as a bone head member for an artificial joint or the like (see the paragraph [0023]).

As indicated by the above descriptions, the matter that a composite ceramic defined by claim 1 of the present application is used as a biological material is a technical matter known to the public, and therefore, there is no technical relationship between the above invention 1 and the inventions 2 to 4 involving the same or corresponding "special technical feature".

Further, there is no technical relationship between respective inventions 2 to 4 involving the same or corresponding "special technical feature", and therefore, the above inventions 1 to 4 is not a group of inventions which are so linked as to form a common single general inventive concept, and accordingly, claims 1 to 20 is considered to include four inventions.

Document 1: JP 2000-191372 A (NGK Spark Plug Co., Ltd.) 11 July, 2000 (11.07.00)

Document 2: JP 09-221354 A (Nikkato Corp.) 26 August, 1997 (26.08.97) Document 3: JP 2003-040673 A (Kyocera Corp.) 13 February, 2003 (23.02.03)
